The 8501 Series transmission system consists of an engine mounted 21 or 23 inch type 8 torque converter, a 9 speed coaxial power-shift transmission and an advanced electronic control system.

**FEATURES & BENEFITS**

- **INCREASED PERFORMANCE**: EFFICIENT GEAR TRAIN COMBINED WITH ELECTRONIC CONTROLS TAILORED TO THE NEEDS OF THE SPECIFIC APPLICATION TO OPTIMIZE MACHINE PERFORMANCE.

- **EASE OF OPERATION**: AVAILABLE AUTOMATIC SHIFTING OR MANUAL POWER SHIFT COMBINED WITH SHIFT INHIBITS AND INTERLOCKS SIMPLIFY THE OPERATOR’S JOB AND ALLOWS FOR CONCENTRATION ON THE JOB RATHER THAN THE POWERTRAIN.

- **REDUCED DOWNTIME**: DURABLE HEAVY-DUTY COMPONENTS COMBINED WITH ELECTRONIC CONTROLS WHICH PREVENT OVERSPEED, SHIFT SHOCKS AND REDUCE THE EFFECTS OF OPERATOR’S ERROR, RESULT IN INCREASED MACHINE AVAILABILITY AND LESS WEAR AND TEAR ON OTHER MACHINE COMPONENTS.

- **SAFETY**: THE CONTROL SYSTEM LOOKS AFTER THE TRANSMISSION SO THE OPERATOR CAN FOCUS ON THE OPERATION OF THE MACHINE. SPEEDS AND INTERLOCKS CAN BE PROGRAMMED TO MEET THE NEEDS OF THE SPECIFIC MACHINE.

**APPLICATIONS**

- OIL FIELD FRACTURING RIGS
- MINE HAUL TRUCKS
- ANCHOR HOISTS
- LARGE CRANES
- SPECIAL PURPOSE EQUIPMENT

**RATIOS**

Specifications subject to change without prior notice in the interest of continual product improvement. Contact your local Twin Disc representative for engineering specifications.
Twin Disc, Incorporated reminds users of these products that their safe operation depends on use in compliance with engineering information provided in our catalog. Users are also reminded that safe operation depends on proper installation, operation and routine maintenance and inspection under prevailing conditions. It is the responsibility of users (and not Twin Disc, Incorporated) to provide and install guards or safety devices which may be required by recognized safety standards or by the Occupational Safety and Health Act of 1970 and its subsequent provisions.

Important Notice: Torsional Vibration
Disregarding system torsional compatibility could cause damage to components in the drive train resulting in loss of mobility. At minimum, system incompatibility could result in gear clatter at low speeds.

The responsibility for ensuring that the torsional compatibility of the system is satisfactory rests with the assembler of the drive and driven equipment.

Torsional vibration analysis can be made by the engine builder, marine survey societies, independent consultants and others. Twin Disc is prepared to assist in finding solutions to potential torsional problems that relate to the transmission.

For nearly a century, we’ve been putting horsepower to work by designing, engineering and manufacturing rugged-duty industrial products. Our products and our reputation are bolted to the most renowned engine manufacturers and equipment OEMs in the world. Our mission is to make your machines and vehicles more productive, more durable, more operator-friendly, more cost-effective. From design and installation consultation through after-sale support, Twin Disc and its distributors are committed to your business. No one knows more about managing horsepower in more ways than Twin Disc.
